

## Used FiberglassRV Evaluation Check List

Many times the little fiberglass-type of RV we are trying to find and buy is in a different state than where we live. I came up with this check list to help people get assistance from a third person who lives close to where the RV is being sold. This check list is only for a point of reference. It is very subjective, based on the person doing the evaluation. An auto mechanic would probably have a very different perspective then an artist when evaluating a fiberglass RV. Electrical Engineers' and Carpenters' opinions would also probably vary greatly.

This check list is to help get neutral information from a fellow Fiberglasser. It should be better then the biased information from a profit-motivated seller.

Remember, the buyer would have to understand that this is a friendly opinion, it carries no legal weight whatsoever. The basis for looking at the trailer would be to let the prospective buyer form an opinion of their own on whether or not to make an offer. In any case, the buyer should retain the right to reject the purchase after looking over the goods.

As always, "Buyer Beware."

OFFICIAL IDENTIFICATION	
VIN number is located:	
The VIN number is:	
Licensed in what state:	
License number:	

OUTSIDE	Excellent	Good	Fair	Poor	Bad	N/A
Wiring harness:						
Lights – lenses and bulbs:
