

ECONOMY: The excellent weight distribution coupled with the sleek low profile design allows the FG-16 to be towed by almost any car at a very economic gas mileage.

SAFETY: It has a tubular welded frame and electric brakes as standard equipment. With the integral welded tubular frame firmly secured to the one piece fiberglass understructure the unit has excellent towability to insure peace of mind while driving. The low silhouette design, in conjunction with excellent weight distribution over the axle, provides a low center of gravity, giving you the most in safe, all-weather towing.

DURABILITY: The single seam, two-piece unitized fiberglass body gives the owner a weather resistant, durable and rigid unit that features a shell which is easy to repair and nearly maintenance-free. With the FG-16, you will never need to worry about wood-rot caused by a bad seam in the metal or about rust or oxidation in the metal itself — there isn't any metal. And more important, the sound and solid unitized fiberglass body replaces antiquated construction methods relying on screws, glue and staples that have a tendency to loosen in over-the-road use. The exterior of your FG-16 will not scratch, dent or ding, thus retaining its original beauty!

general construction features (STANDARD ON ALL MODELS)

PRACTICAL: The FG-16 travel trailer from AMERIGO is compact and at the same time... roomy. It features a large dinette plus a roomy lounge area. The modernistic low line design concept of the FG-16 with a total height of only 7 feet has the added practical feature of being able to be stored in most garages. The urethane foam and fiberglass insulation insures the FG-16 owner of comfortable living in all seasons.

BEAUTY: Both inside and out, the FG-16 is distinctively sleek. From the low line design concept of the stylish unitized fiberglass body... to the unique and exclusive undercarriage... and the tinted windows with their rounded corners that provide the owner with over 38 square feet of natural light... the FG-16 looks like it's on the go when it's standing still. The interior is appointed and designed for discriminate people seeking a unit that offers both practical comfort and contemporary charm.

General Construction Features

Truck Campers

FIBERGLASS FEATURES: All AMERIGO campers utilize a one-piece fiberglass roof and front section for superior all weather resistance and maintenance. A fiberglass shower stall is also incorporated on self contained models to prevent any possibility of water leakage.

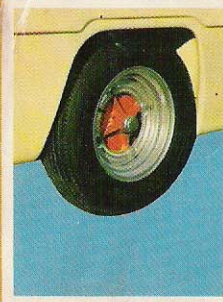

SIDEWALLS AND ROOF: The sidewalls and roof are constructed with high quality, unwarped lumber. Throughout, the unit is completely glued and screwed, using 3" treated screws. Stress points carry additional supports.

INSULATION: Every AMERIGO camper has thick 1½" insulation to insure ultimate comfort and maximum cooling ... the reason why an AMERIGO is an "All Weather Camper".

PLUMBING: All gas lines as well as the pressurized water lines are constructed out of copper and pre-formed for a specified floor plan as a harness, thereby eliminating flat and nicked corners, crooked lines and subsequently, leaks. All connections are designed for easy access.

EXTERIOR: The one piece roof and front section, coupled with the appealing wrap-around panoramic window, are AMERIGO exclusives. These fiberglass features protect the AMERIGO against all weather conditions, simultaneously providing the ultimate in easy maintenance. The air flow conception of the AMERIGO'S dynamic and functional designed front, provides a minimum of wind resistance.

Travel Trailers
